SUMMARY

Information Systems graduate (BINUS University) with 5+ years of experience working where business processes meet technology. Skilled in business process analysis, requirement elicitation, AS-IS / TO-BE mapping, and identifying pain points such as manual steps, validation gaps, and approval dependencies, then turning business rules like pricing, discounts, and approvals into clear, testable requirements.

Experienced in preparing BRDs, system specifications, test scenarios, and test reports; coordinating with business users, Product, UI/UX, vendors, and engineering teams; and validating solutions through SIT and UAT. A software engineering background enables realistic assessment of feasibility, effort, and impact on existing systems, including SAP.

EXPERIENCE

Fullstack Developer

VIVERE GROUP ↗

09/2024 - Present

- Collaborate with Business Analysts, Product, business users, UI/UX, vendors, and engineering teams to clarify requirements, resolve ambiguities, and define expected system behavior.
- Analyze end-to-end business processes (AS-IS / TO-BE) and translate them into functional requirements, business rules, validation rules, system flows, API specifications, and data structures.
- Analyzed the sales quotation and approval process (inquiry, product selection, pricing, discount, approval, and order validation) and translated its pricing, discount, and approval rules into functional requirements and approval logic, delivered on mobile and web and integrated with SAP.
- Analyzed the employee attendance process and defined validation rules for location, identity, time, and supporting evidence (building selection, location check, selfie, on-device face validation), then delivered the end-to-end flow across Android, iOS, API, and backend.
- Perform impact analysis on enhancements across applications, APIs, databases, and integrations before implementation to prevent regressions and disruption to running business processes.
- Define API contracts and integration requirements with mobile/frontend developers and SAP (OData), covering request/response mapping, validation, and error handling to keep data consistent across systems.
- Investigate functional and production issues raised by testers and business users during SIT and UAT, tracing business flow and system behavior to isolate root causes before applying fixes.
- Designed the concept for a sales intelligence dashboard covering the sales pipeline, quotation status, closed/dropped deals and drop causes, and sales performance, defining the data flow from business transactions to insight.
- Contribute to solution design and documentation, weighing business value against complexity, risk, and maintainability.
- Build solutions hands-on across Android (Kotlin), iOS (Swift), web, backend services (Golang, Laravel), and relational databases, ensuring the implementation matches agreed business requirements.
- Support release preparation, deployment, and post-production monitoring to confirm solutions work as intended in production.

Application Developer & Support Engineer

PT. Garuda Yamato Steel ↗

12/2022 - 09/2024

- Developed and maintained business applications using Laravel, CodeIgniter 3, Vue.js, Angular, JavaScript, Go, Flutter, and SQL Server.
- Developed and maintained an unmanned weighbridge management system using Laravel and Vue.js, focusing on system efficiency and user interaction.
- Developed and maintained Vendor Management and customer pre-registration applications using CodeIgniter 3.
- Developed and maintained REST API integrations to support data exchange between applications and enterprise systems.

- Integrated application data with SAP systems through APIs, improving data synchronization and operational integration.
- Performed application support, production troubleshooting, and data correction to maintain system availability, data accuracy, and system integrity.
- Identified, documented, and analyzed front-end and back-end production bugs to support root cause analysis and continuous improvement.
- Created and maintained Business Requirements Documents (BRD), system specifications, technical documentation, test scenarios, and test reports.
- Defined software requirements based on business needs and translated them into technical specifications.
- Assisted teams during System Integration Testing (SIT) and User Acceptance Testing (UAT).
- Worked closely with operations, business users, and development teams to investigate issues and streamline debugging.
- Applied SDLC principles across requirements analysis, development, testing, deployment, and application support.
- Monitored and enhanced 34 UiPath RPA processes to support operational efficiency.

Fullstack Developer

07/2022 - 12/2022

PT. Kost Profesional Indonesia

- Built and maintained frontend and backend applications using Laravel 9.
- Gathered and translated technical and business requirements into application features.
- Contributed across the complete software development lifecycle including design, development, testing, documentation, and release.
- Collaborated with engineers to develop and deploy new application features.
- Investigated production issues and performed troubleshooting to minimize user impact and system downtime.
- Analyzed recurring bugs and recommended application improvements for continuous system improvement.

Fullstack Developer

01/2022 - 06/2022

PDSI Kementerian Komunikasi dan Informatika

- Designed and developed a web-based activity scheduling application using CodeIgniter 3 and MySQL.
- Analyzed system requirements and recommended software improvements.
- Developed, tested, debugged, and maintained application features.
- Troubleshoot technical issues and produced technical documentation.

Fullstack Developer

09/2021 - 12/2021

PT PIN

- Designed and developed an e-commerce application for Smart Farming using CodeIgniter 3 and MySQL.
- Collaborated with system analysts to translate client requirements into application functionality.
- Performed application testing, troubleshooting, and debugging.
- Produced technical documentation and monitored application-supported business processes.

Web Developer - Frontend

02/2021 - 05/2021

UMKM Bogor City

- Developed a responsive landing page application using HTML5 and CSS.
- Collaborated with system analysts to translate requirements into frontend implementation.
- Ensured application usability, visual consistency, and reliable browser functionality.

EDUCATION

Information System

02/2023 - 01/2025

BINUS University - Bachelor Degree

GPA : 3.89/4.00

Informatics Management

07/2019 - 08/2022

Vocational School IPB University - Diploma

GPA : 3.74/4.00

SKILLS

Stakeholder Communication		UI/UX
Business Process Analysis		Dart (Flutter)
Requirement Analysis		Python
BRD & System Specification		Golang
Impact Analysis		Laravel
SIT / UAT		PHP
Data Flow		Vue Js
API & Database Design		JAVA
Sequence Diagram		Project Management
Use Case		User Acceptance Testing
Kotlin	Advanced	Manual Testing
Swift	Advanced	Compliance Management
Android	Advanced	SQL Server
Architecture		CodeIgniter
Compose		Jquery
Performance		HTML 5 & CSS
Crash Fix		Javascript
API		MySQL/PostgreSQL

LANGUAGES

English	Intermediate	Indonesian	Native
